

Example : score_function.py

```
def calculate_score(items, threshold):
```

```
    score = 0
```

```
    for item in items:
```

```
        if item > threshold:
```

```
            score += (item * 2)
```

```
    return score
```

```
items = list(range(1, 50001))
```

```
threshold = 25000
```

```
result = calculate_score(items, threshold)
```
